SUMMARY

Full-Stack Developer who independently designs and ships production-grade applications end-to-end — from architecture to deployment. Solely built a real-time collaborative code editor (Socket.io, Redis-backed horizontal scaling) and an enterprise-style e-commerce platform with full payments and admin analytics. Code and architecture decisions have been rigorously reviewed and stress-tested by industry professionals with 3–5+ years of experience, ensuring work meets real production standards. Also freelance for live clients, delivering and maintaining production websites end-to-end. Comfortable owning every layer of a project — from system design to deployment and client communication.

WORK EXPERIENCE

Freelance Frontend Developer | Self-Employed (2026 – Present)

- Designed, developed, and deployed responsive business websites for travel agencies and tour package companies, owning the project from client requirements to launch.
 - Built SEO-friendly, mobile-first sites with performance optimization and cross-browser compatibility.
 - Integrated WhatsApp inquiry/booking workflows, custom forms, domain setup, hosting, and deployment.
 - Managed the entire delivery pipeline solo — version control, testing, debugging, and post-launch support — while maintaining direct client relationships.
-

TECHNICAL SKILLS

Languages

JavaScript, TypeScript, Python, Bash / Shell scripting, Go

Frontend

- React, Next.js, HTML5, CSS3
- Tailwind CSS, Material UI (MUI), Chakra UI
- Three.js, Vue.js (basic), Astro
- Redux Toolkit, Zustand, zod, GSAP, Ant Design, chart.js, framer motion

Backend

- Node.js, Express.js
- REST API design, GraphQL
- Go (net/http), Gin
- WebSockets, Socket.io
- Background jobs & queues (Bullmq)

Databases & Data Stores

- MongoDB, Redis, MySQL, PostgreSQL

DevOps & Infrastructure

- Linux & SSH, Nginx (reverse proxy)
 - Docker, Docker Compose
 - AWS, DigitalOcean, Vercel, Render
 - PM2
 - Environment variables & secrets
 - CI/CD (GitHub Actions – working knowledge)
 - Monitoring & logging (Grafana, Loki)
 - Kubernetes (working knowledge)
-

PROJECTS

● Online Collaborative Code Editor (Real-Time Learning Platform)

Remote peer-to-peer coding, mentoring, and real-time collaboration platform

- Built a real-time collaborative code editor allowing multiple developers to code simultaneously with live cursors, chat, and voice—no local setup or screen sharing required.
- Implemented multi-user real-time synchronization with conflict-free updates, ensuring consistent state across concurrent editors.
- Architected a horizontally scalable real-time backend supporting thousands of concurrent connections with low latency.
- Designed secure authentication, role-based access control, payments, analytics, and background workflows in a production-grade system.

Tech Stack:

- Frontend: Next.js 15, React 19, TypeScript, Tailwind CSS, Monaco Editor
- Backend: Node.js, Express, Apollo GraphQL, REST APIs, Socket.io
- Databases & Messaging: MongoDB, Redis
- Auth & Payments: Firebase Authentication, JWT, Razorpay
- DevOps & Infrastructure: Docker, Kubernetes, BullMQ

● PROGAD — Advanced E-Commerce Platform

- Built a scalable e-commerce system with product variants, real-time inventory validation, Razorpay payments, and full order lifecycle management.
- Developed admin dashboards with real-time analytics, automated invoices, and sales reporting.
- Implemented face-recognition authentication alongside JWT and Google sign-in.

Tech Stack:

- Frontend: Next.js 15, React 19, TypeScript, Tailwind CSS, Monaco Editor
- Backend: Node.js, Express, Apollo GraphQL, REST APIs, Socket.io
- Databases & Messaging: MongoDB, PostgreSQL (Neon), Redis
- Auth & Payments: Firebase Authentication, JWT, Razorpay
- DevOps & Infrastructure: Docker, Kubernetes, BullMQ

● AI-Powered Resume Builder

- Implemented PDF generation with Puppeteer and cloud storage via Cloudinary
- Developed resume upload feature with PDF parsing (pdf-parse) for AI-based content enhancement
- Designed ATS-optimized resume structures for improved recruiter system compatibility
- Built real-time editing and preview functionality using React Hooks
- Developed RESTful APIs using Express with Prisma ORM and Neon PostgreSQL
- Containerized application with Docker and deployed to Vercel (frontend) and Render (backend)

Tech Stack:

- Frontend: Next.js 16 (App Router), TypeScript, Tailwind CSS
- Backend: Express 5, PostgreSQL (Neon), Prisma ORM
- AI & Infra: Google Gemini AI, Puppeteer, Cloudinary, Docker

EDUCATION

Higher Secondary Education (12th Grade)

2022 - 2023

State Board — 2023

Industry-Oriented Software Engineering Program

2025- 2026

- Completed industry-style, self-driven training focused on real-world, production-grade problem solving using modern tools, architectures, and best practices.
- Worked on complex engineering assignments reviewed by industry professionals with 3–4+ years of experience, receiving technical evaluations and feedback aligned with current industry standards.
